

CASE STUDY

ENDURACLAD INTERNATIONAL (ECI)

“ Enduraclad International continue to use BIVALLOY® products due to its high quality and good wear life. - Jason Kell ”

BIVALLOY STEELS AND ENDURACLAD INTERNATIONAL, FRONTRUNNERS IN WEAR PLATE

Enduraclad International (ECI) is an Australian based privately owned company with its main facility located in Western Australia, and a fabrication workshop in Queensland. ECI are a specialised wear protection company, with experience in quenched and tempered steel, hard face overlay, ceramics, and polymers.

Recently, ECI installed a new 400 Amp Hypertherm cutting machine to further add to their extensive capabilities and to boost productivity. To demonstrate this, the team at ECI cut 60mm thick BIVALLOY® 500 grade so fast that the turnaround time to the customer was just 3 hours from the time of ordering.

Enduraclad International's Managing Director, Jason Kell, commented "the Australian mining market need their products quickly - no one can afford to stop, or have significant down time. Our new machines give us the ability to meet these demands, even when we are cutting 60mm thick BIVALLOY® plate. We are a one-stop shop."

ECI have been using Bisalloy products for over two years. "We continue to use Bisalloy due to its high quality and good wear life" remarked Jason.

Bisalloy Steels is Australia's only manufacturer of high strength and high hardness quenched and tempered steel. Bisalloy has been proudly producing for the Australian mining market for over 40 years.
